

SUPREME COURT COMPLEX 3-ARM ZONE, ABUJA.

A subtle experience in modern renovation, this project involved modernizing and upgrading an existing two storey building comprising of two blocks to a functional and decent modern office that justifies value for money.

Being the smallest building within the Supreme court complex, we attempted to evoke the intricacy of good detailing with use of contemporary finishing materials to upgrade the interior and exterior quality thereby creating conducive environment for the Staff and management to work in, with a view to improving their productivity- and we succeeded.

Mechanically fixed Moca-Limestone tiles were cladded on existing delapidated mosaic tiles.

The result is a high quality office accommodation with a generous provision of natural light.

Client: Federal Judicial Service Commission

Main Contractor: BNL Construction Ltd.

Completed : November, 2011.
